It currently consists of 36 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

13. Mpl: 95-036494/05.

14. Mew vectors for gene therapy, partic for tumours - comprising genetic material encoding one or more cistron(s) which express genetic material encoding one or more cistron(s) which express claim 9: Page 42-43: SOpp: English.

12. This HiA-B7 antigen encoding plasmid was developed to incorporate many advantageous features, eg. the kanamycin resisitance gene. The advantageous features, eg. the kanamycin resisitance gene. The proteins lowers the risk of tumourigenicity. The vector may also operate as cassette into which cistrons may be inserted and removed at will be to the transcription and subsequent translation of peptides of interest.

13. The vector is used partic. for the treatment of neoplastic disease, and and provides enhanced gene delivery and expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                /*tag= a

New vectors for gene therapy, partic for tumours - comprising

New vectors for gene therapy, partic for tumours - comprising

The properties of therapeutic peptide(s)

The pula-B/Deta-2 microglobulin plasmid expression vector, in addition

CC the kanamycin resistance gene, contains the plasmid DNA encoding the

CC the kanamycin resistance gene, contains the plasmid DNA encoding the

CC the kanamycin resistance gene, contains the plasmid DNA encoding the

CC class I major hisotocompatibility complex (MHC) antigen. The plasmid is

CC class I major hisotocompatibility complex (MHC) antigen. The plasmid is

CC class I major hisotocompatibility complex (MHC) antigen. The plasmid is

CC class I major hisotocompatibility complex (MHC) antigen. The plasmid is

CC class I major hisotocompatibility properties of the mana is dependent

CC class I major hisotocompatibility from the bovine growth hormone

CC designed to express these two proteins via a bicistronic mena is regulated by the

CC controlled by the CTER. Finally the replication of the plasmid in

CC controlled by the CTER. Finally the replication of the plasmid in

CC controlled by the CTER. Finally the replication of the plasmid in

CC controlled by the corter is used partic. for the treatment of neoplastic

CC disease, eg. melanoma, and provides enhanced gene delivery and expression

Disclosure: Page 29: 44pp: English.

The CR-3 nucleotide sequence was isolated from a human genomic library using a labelled DNA fragment containing 800bp upstream of the translation initiation site of CR-1. Clones were isolated which contained the 5' cDNA non-coding region of CR-3. One clone was
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human CRIPTO-related gene CR-3. cell proliferation; tumour; CR-1; transforming growth factor; epidermal growth factor; ss.

sequenced and found to include a complete CRIPTO CDNA lacking introns and containing a poly(A) tract at the 3' end. Seven single base pair substitutions were observed in the coding region (c.f., CR-1 sequence in Ciccodicola A. et al., EMBO J.8:1987-1991(1989)), six of which gave rise to amino acid changes. The 3' non-coding c sequence is less similar (97% identical) to CR-1. Most of the differences occur in the inverted Alu sequence. The unusual poly(A) addition site AGTAAA found in the CR-1 gene is also conserved in CR-3. The similarity between CR-1 and CR-3 extends for 697 nucleotides upstream of the initiator AUG where it is possible to observe 7 base pair substitutions and 6 nucleotide deletions. The 14 "Others" in the sequence represent nucleotides whose cidentity, although determined by the inventors, was unclear in the sequence 2675 BP; 738 A; 611 C; 553 G; 759 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              seq_documentation_block:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Tills encodes a human CRIPTO-related gene product CR-3. CR-3 is thought to be a tumour-specific marker and as such DNA and amino acid sequences of CR-3 and derivatives can be used in the diagnosis, prognosis and possibly treatment of some types of cancer. CR-3 includes a region homologous to products of the epidermal growth factor superfamily of genes and it may be a mitogen involved in regulating proliferation, differentiation and transformation of sequence 2675 BP; 618 C; 555 G; 763 T;

```
This sequence represents the CRPTO-related gene, CR-3. The CR-3 gene sequence is identical to the human CRIPTO gene with the exception of eight base pair substitutions that give rise to six amino acid changes. GR-3 exhibits partial amino acid sequence homology and a tertiary structure within a 38 amino acid sequence homology and a tertiary structure within a 38 amino acid region similar to the epidermal growth factor (EGF) supergens family that includes EGF, TGF-alpha and amphirequilm. Expression of CR-3 may serve as a tumour specific marker as it is expressed in several human colon cancer cell lines and possibly in human colorectal tumours. The assay of the amount of CR-3 in a sample can be used in studies on the regulation of the proliferation, differentiation, and transformation of various mesenchymal and epithelial cells. Study of the expression of CR-3 may also be used in the diagnosis, prognosis and treatment of tumours.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Assays for CRIPTO-related gene product CR-3 - used in studies on the regulation of the proliferation, differentiation and transformation of cells

                                                                                                                                                                                                                                                                                                                                                             Example 3; Columns 17-22; 26pp; English.

The present sequence encodes a human CRIPTO-related protein CR-3. The present sequence encodes a human CRIPTO-related protein CR-3. The specification describes an antibody which has binding affining to CR-3 and not to CR-1. The antibodies can be used for the detection of CR-3. CR-3 is a regulatory molecule involved in regulating the proliferation, differentiation, and transformation of various mesenchymal and epithelial enlar in addition expression of CR-3 may serve as a tumour specific marker that may have applicability in the diagnosis, prognosis and possible treatment of specific types of cancer.

                                                                                                                                                                  New antibody to human CRIPTO-related polypeptide-3 - used for the detection of CRIPTO-related polypeptide-3 which is involved in the regulation of the proliferation, differentiation and transformation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New CRIPTO gene CR-1 and CRIPTO-related gene CR-3 genomic DNA - CR-3 protein and anti-CR-3 antibodies, useful in immunoassay to detect CR-3 as tumour specific marker

Disclosure: Page 22: 44pp: English.

The CR-1 genomic clone can be used in transgenic animals to examine the effects of overexpression of this gene on development and tumorigenicity and to study regulation of CR-1 gene.

This sequence represents the coding sequence for the alpha subunit of the soybean seed protein beta-conglycinin. The method of the invention is for reducing the quantity of a soybean seed storage protein (A), such as beta-conglycinin, in soybeans. It comprises: (a) constructing a chimeric gene comprising: (i) a nucleic acid fragment encoding all or a portion of (A) placed in sense or antisense orientation region; (b) creating a transgenic soybean cells of (1); and (11) a transcriptional termination region; (b) creating a transgenic soybean cell the chimeric gene of (a); and (c) growing the transgenic soybean cells of (b) under conditions that result in expression of the chimeric gene of (a); where the quantity of one or more members of a class of (A) subunits is reduced when compared to soybeans not containing the chimeric gene of (a); the method is used to construct transgenic soybean a lines where the expression of genes encoding (A) are modulated to effect a change in seed storage protein profile of transgenic plants.
                                                                                                                                      The present sequence encodes a human CRIPTO-related protein CR-1. The specification describes an antibody which has binding affinity to CR-3 and not to CR-1. The antibodies can be used for the detection of CR-3. CR-3 is a regulatory molecule involved in regulating the proliferation, differentiation, and transformation of various mesenchymal and epithelial cells. In addition expression of CR-3 may serve as a tumour specific marker that may have applicability in the diagnosis, prognosis and possible treatment of specific types of cancer. Claim 1) Page 412-413; 2084pp; English.

A computer readable medium has been developed which has recorded on it
A computer readable medium has been developed which has recorded on it
922 nucleotide sequences isolated from the Enterococcus faecalis genome.
X12938 to X13919 represent these nucleotide sequences which are primary
nucleotide sequences, also known as contigs. The computer based system
can identify fragments of the Enterococcus faecalis genome with
commercial importance. The products can be used to detect the presence
of Enterococcus faecalis in samples. They can also be used for
diagnosing Enterococcus infection in an animal and monitoring
progression of disease, and for identifying agents which can be used to
modulate the growth or pathogenicity of Enterococcus faecalis, or
another related organism, in vivo or in vitro. In particular the
polypeptides encoded by the Enterococcus faecalis nucleotide sequences
can be used in vaccines to prevent or attenuate an Enterococcal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  12-NOV-1998.

New isolated Enterococcus faecalis polynucleotides and polypeptides need to develop products for the detection of Enterococcus and for used to develop products for the actenuation of Enterococcus and for use in vaccines for prevention or attenuation of Enterococcus
Modification of the seed storage protein profile can result in the production of novel soy protein products with unique and valuable functional characteristics.

The present sequence encodes a secreted protein. The polynucleotide and secreted protein are predicted to have biological activities which would make them suitable for treating, preventing neclical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating activity, issue growth activity, activity, haematopolesis regulating activity, tissue growth activity, activity,inhibin activity, chemotactic/chemokinetic activity, activity, inhibin activity, receptor/ligand activity, anti-inflammatory activity, cadherin/tumour invasion suppressor activity, and tumour inhibition activity (no data is given in the specification to support these activities). The polynucleotide is also stated to be useful for gene therapy.

Sequence 745 BP; 179 A; 229 C; 176 G; 161 T;
   chemokinetic activity; haemostasis; thrombolytic activity; receptor; ligand; anti-inflammatory; cadherin; tumour invasion suppressor; tumour inhibition; gene therapy; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DNA encoding TIE 11gands 3 and 4 - useful for, e.g. blocking blood vessel growth and promoting neovascularisation, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                              New polynucleotides encoding secreted human proteins - derived fro human foetal brain, adult brain, foetal kidney, placenta or adult pineal gland cDNA 11braties. Claim 26; Page 80; 113pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                tyrosine kinase; mouse;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        22-JUN-1998 (first entry)
Mouse TIE-2 receptor ligand 3 cDNA.
TIE-2 receptor ligand; TIE ligand-3; tyrosine kinase; mouse, anglogenesis; vascularisation; blood vessel growth; tumour;
                                                                                                                                                                           20-WAR-1998; U05653.

   DD PRESENTATION OF THE PROPERTY OF THE PROPERT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            EST clone CG336. Indiana: expressed sequence tag; EST; haematopoiesis; tissue growth; activin; inhibin; chemotaxis; chemokinesis; haemostatic; receptor; ligand; thrombolytic; anti-inflammatory; cadherin; anti-tumour;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New polynucleotides encoding human secreted proteins - derived from
e.g. human blood, kidney, foetal lung, placenta, testes, brain,
ovary, pitutary, retina and colon cDNA libraries.
To claim 1: Page 171; 618pp: English.
The present sequence represents a human expressed sequence tag (EST).
The polynucleotide, which is a secreted EST, and the encoded protein
are predicted to have useful biological activities which would make
them suitable for treating, preventing or ameliorating medical
conditions in humans and animals, although no supporting data is
given: Suggested activities include nutritional activity, immune
stivity, tissue growth activity, activin/inhibin activity,
chemotactic/chemokinetic activity, haemacopolesis regulating
activity, tissue growth activity, activin/inhibin activity,
cativity, receptor/ligand activity, anti-inflammatory activity,
activity, tumour invasion suppressor activity, tumour inhibition
activity. The polynucleotide may also be useful for gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        25-FEB-1999 (first entry)
Clone dn809_5 isolated from human foetal brain cDNA library.

                                                               homology domains. It was obtained by PCR amplification of CDNA derived from mouse cell lines C2C12ras and MGB7 using primers (see T9955-96) specific for mTL3. A host-vector system for the production of mTL-3 is claimed, as well as an antibody which specifically binds mTL-3, a receptorbody which specifically binds mtl-3, a conjugate comprising mTL-3 and a cytotoxic agent, and an isolated nucleic acid (see T99593) coding for human TIE ligand 4 blocking blood vessel growth, promoting for human tie ligand 4 blocking or blocking the growth of differentiation of a cell expressing the TIE receptor and attenuating or preventing tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Tumour rejection antigen precursor coding sequence.

WPI: Pacating dimer peptide(s) - based on a Class I HLA-B
alpha-1 domain, used for preventing rejection of transplants or
treating autoimmune diseases
treating autoimmune diseases
Claim 17; Page 35; 41pp: English.
This sequence represents a specifically claimed immunomodulating
dimer peptide of the invention. A peptide-type compound or variant is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
19-JUN-1998 (first entry)
Peptide B2702.84-79/79-84 tested for immunomodulating activity.
Immunomodulating dimer; immunosuppressant drug; CTL activation;
transplantation; autoimmune disease; Class I HLA-B alpha-1 domain;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Immunomodulating dimer péptide #3.
Immunomodulating dimer; immunosuppressant drug; CTL activation;
transplantation; autoimmune disease; Class I HLA-B alpha-1 domain;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

claimed which has immunomodulating activity, including the N-terminal acylated and/or C-terminal amidated or esterified forms of up to 60 amino acids, where the peptide-type compound comprises the formula: A-B, where A, B = (R aaf6-77L) (aa79-84) or (aa84-79) (Laa77-76R); aa76 = E or V; aa77 = D, S or N; aa79 = R or G; aa80 = I or N; aa81, aa84 = a represents amino acid; aa82 = R or L; aa83 = G or R; and aa represents amino acid. The sequence in the brackets may optionally be absent or truncated at any peptide type bond within the brackets. The compounds comprise amino acid sequences related to a Class I HLA-B alphal domain (positions 79-84). They can be used to inhibit cytocoxic T-lymphocytes (CTL) from undesirably attacking cells in a host or in vitro. They can also be used in combination with antigenic peptides or proliferation of I cells in response to anti-CD3. The peptide can be used for preventing rejection of transplants or for treating autoimmune diseases, e.g. diabetes, rheumatoid arthritis and lupus erythematosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Example 15; Page 36; 80pp; English.

R83061-R83085, R83090-R83096 and R92907-R92914 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is an inverted dimer of residues 75-84 of the alpha-1 domain of the class I MHC HIA-B2702. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to administration for a limited period of time (compared to the lifetime modulate (or inhibit) the activity of the cytotoxic T lymphocytes (CTLs) of the patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         HLA-B2702 CTL modulating peptide (B2702.84-75/75-84). Cytotoxic I lymphocyte; CTL; major histocompatibility complex; MHC; immunosuppressant; graft versus host disorder; transplantation; therapy;

Claim 16; Page 35; 41pp; English.

This sequence represents a specifically claimed immunomodulating
dimer peptide of the invention. A peptide-type compound or variant is
claimed which has immunomodulating activity, including the N-terminal
acylated and/or C-terminal amidated or esterified forms of up to 60
acylated and/or C-terminal amidated or esterified forms of up to 60
acylated and/or C-terminal amidated or esterified forms of up to 60
acylated and/or C-terminal amino acids, where the peptide-type compound comprises the formula; where A, B = (R aa76-77L) (aa79-84) or (aa84-79) (Laa77-76R); aa76 = E or V; aa77 = L). S or N; aa79 = R or G; aa80 = I or N; aa81, aa48 = E or V; aa77 = L). S or N; aa78 = R or G; aa80 = I or N; aa81, aa48 = E or N; aa81 and a a and a as a represents amino acid; The sequence in the brackets may optionally be a compounds comprise amino acid sequences related to a Class I HLA-B alphal domain (positions 79-84). They can be used to inhibit cytotoxic T-lymphocytes (CTL) from undesirably attacking cells in a host or in vitro. They can also be used in combination with antigenic peptides or proteins of interest to activate CTLs. They can also inhibit the used for products of interest to activate CTLs. They can also inhibit the used for products or a service o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ä
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Example 15; Page 36; 80pp; English.

R83061-R83085, R8309-R83096 and R92907-R92913 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is an inverted dimer of residues 75-84 of the alpha-1 domain of the class I MHC HLA-B2702. These sequences can be used to extend the period of The peptides are administered to a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to the patient for a limited period of time (compared to the lifetime modulate (or limited period of time (compared to the lifetime modulate (or inhibit) the activity of the cytotoxic T lymphocytes (CTLs) of the patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              HLA-B2702 CTL modulating peptide (B2702.84-75/75-84(T)). Cytotoxic T lymphocyte; CTL; major histocompatibility complex; MHC; immunosuppressant; graft versus host disorder; transplantation; therapy; class I MHC; HLA-B2702.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                    à
                                                                                                                                                                                                                                                                                                                                                                                                                                Example 15; Page 36; 80pp; English.

R83061-R83085, R83090-R83096 and R92907-R92914 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is an inverted dimer of residues 75-84 of the alpha-1 domain of the class I MHC HLA-B2702. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to administered to time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic T lymphocytes (CTLs) of the patient.
                                                                                                                     16-MAY-1996 (first entry)

HLA-B2702 CTL modulating peptide (B2702.84-75(T)/75-84).

Cytotoxic T lymphocyte; CTL; major histocompatibility complex; MHC; immunosuppressant; graft versus host disorder; transplantation; therapy; class I MHC; HLA-B2702.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New immunomodulating dimer peptide(s) - based on a Class I HLA-B alpha-1 domain, used for preventing rejection of transplants or treating autoimmune diseases.

Example 1, Page 19; 41pp, English.

Peptides W33784-98 and W33778-9 were assayed for their immunomodulating activity. A peptide-type compound or variant is claimed which has immunomodulating activity, including the N-terminal acylated and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               19-JUN-1998 (first entry)
Peptide B2702.84-75r/75-84 tested for immunomodulating activity.
Immunomodulating dimer; immunosuppressant drug; CTL activation;
transplantation; autoimmune disease; Class I HLA-B alpha-1 domain;
                                                                                                                                                                                                                                                                                                                                                                              Extension of acceptance period of transplants from MHC unmatched donor hosts – using Class I B75-84 MHC antigen of the recipient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ..

ò g NAME OF THE PROPERTY OF THE PR

```
the peptide-type compound comprises the formula; A-B, where A, B = (R aa76-771) [aa79-84) or (aa84-79) (Laa77-76R); aa76 = E or V; aa77 = D, S or N; aa79 = R or G; aa80 = I or N; aa11, aa84 = a hydrophobic or small amino acid; aa82 = R or L; aa83 = G or R; and aa represents amino acid. The sequence in the brackets may optionally be absent or truncated at any peptide type bond within the brackets. The compounds comprise amino acid sequences related to a Class I HiA-B alphal domain (positions 79-84). They can be used to inhibit cytotoxic T-lymphocytes (CTL) from undesirably attacking cells in a host or in vitro. They can also be used in combination with antigenic peptides or proteins of Interest to activate CTLs. They can also inhibit the proliferation of T cells in response to anti-CD3. The peptide can be used for preventing rejection of transplants or for treating autoimmune diseases, e.g. diabetes, insending atthritis and lupus erythematosis. The products can also be used for detection and diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ĥ

Peptide B2702.84-75/75-84T tested for immunomodulating activity.
Immunomodulating dimer; immunosuppressant drug; CTL activation;
transplantation; autoimmune disease; Class I HLA-B alpha-1 domain;
rejection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 .;

Example: Page 12: 29pp; English.

R94313, and R95415-R9543 represent palindromes and fragments of human-leucocyte-associated antigens. This sequence represents the car and 12: 20pp; English.

CC R0413, and R95415-R9543 represent palindromes and fragments of human-leucocyte-associated antigens. This sequence represents the car associated protein p74 from a T-cell lyses equences can be used too isolate the protein p74 from a T-cell lyses equences can be used too and is also immunologically cross reactive with the heat shock protein R70. p74 is found in a limited number of cell types, but is particularly expressed on B and T cells. p74 can be isolated by lysis of a suitable cell with an amphoteric detergent, and then passed through an affinity column containing a covalently bound HLA-B2702 palindromic peptide. Compositions comprising the extracellular fragment of p74 combined with HLA-B2702.60-84 (see R95416), induces calcium influx, and inhibits cytotoxic T lymphocyte (CTL) differentiation or the cytolytic combined with HLA-B2702.60-84 (see R95416), induces calcium influx, and inhibits cytotoxic T lymphocyte (CTL) differentiation or the cytolytic cactivity of T-cells, by combining them with the extracellular portion of p74 and determining the amount of binding between the candidate compound and p74. Modulation of CTL activity can be inhibited in a cellular composition containing T-cells and antigen presenting cells (APCS), by sequence 20 AA; the extracellular portion of p74, in an amount sequence 20 AA; the p74 ligand.

R71429;
12-OCT-1995 (first entry)
Human MHC 1 alpha 1 domain peptide [Ala81]-Dk-(69-85).
Major histocompatibility complex class 1; MHC 1; cell receptor; alpha 1 domain; peptide [Ala81]-Dk-(69-85); interaction modulation; arthritis; neoplasias; lupus erythematosus.
                                       .

Human neuronal nicotinic acetylcholine receptor alpha-3 subunit.
Human; neuronal nicotinic acetylcholine receptor; alpha-3 subunit;
brain tissue; screening; NRChR; antibody.
                                                                                                                                                                                  Example 4: Page 45: 103pp; English.
R71424-R71438 are human major histocompatibility complex class 1
(MHC 1) alpha 1 domain derived peptides and peptide mutants, they were used to modulate interactions between MHC 1 and cell surface receptors. Via competitive inhibition the peptides diminish the receptors response, this feature may be useful for the treatment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                   Regulating cell surface receptor response - by modulating interaction between MHC class I antigen and the cell surface
                                                                                                                                                                                                                                                                                                                                                                                                                                    Score 35; DB 1; Length 18; Pred. Example 2: Page 72-73; 99pp; English.

The present sequence represents a human neuronal nicotinic acetylcholine receptor (NAChR) subunit. The cells expressing the alpha and/or beta neceptor (NAChR) subunit. The cells expressing the alpha and/or beta NAChR subunits may be used in a method of screening compounds to identify any which modulate the activity of human neuronal NAChR.

Subunit specific antibodies may be used to monitor the distribution and expression density of various subunits in normal vs diseased brain tissues. Testing of single receptor subunits or specific receptor subunit combinations with respect to the function and activity of the individual subunits and should lead to the identification and design of compounds that are capable of very specific interaction with one or more receptor subtypes. The resulting direraction with one or more receptor subtypes. The resulting density should exhibit fewer unwanted side effects than drugs identified e.g. screening with cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Example 15; Page 36; 80pp; English.

R83061-R83085, R83096 and R92907-R92914 represent fragments of class I major histocompatibility complex (MHC) antigens. This sequence is a dimer of residues 75-84 of the alpha-1 domain of the class I MHC HIA-B2702. These sequences can be used to extend the period of acceptance by a recipient of a transplant from an MHC unmatched donor. The peptides are administered to a patient in conjunction with a subtherapeutic amount of an immunosuppressant. This is administered to about the patient for a limited period of time (compared to the lifetime administration for current treatments). The peptides particularly modulate (or inhibit) the activity of the cytotoxic I lymphocytes (CILS)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              16.MAY-1996 (first entry)
HLA-B2702 CTL modulating peptide (B2702.84-75/84-75).
CYLOCOXIC T lymphocyte; CTL; major histocompatibility complex; MHC; immunosuppressant; graft versus host disorder; transplantation; therapy; class I MHC; HLA-B2702.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Submitted to the EMBL Data Library, June 1995
A; Description: The sequence of S. cerevisiae cosmid 9476.
A; Reference number: S61146
A; Reference number: S61146
A; Accession: S69745
A; Molecule type: DNA
A; Residues: 1-128 < DUZ>
A; Cross references: EMBL:U28372; NID:g849170; PID:g2194159; MIPS:YDR360w
C; Genetics:
A; Map position: 4R
C; Superfamily: Saccharomyces hypothetical protein YDR360w
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           microtubule binding; P-loop
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

         "Cytoplasmic dynein and actin-related protein Arpl are required for normal nuclear distribution in filamentous fungi.";

"Cytoplasmic dynein and actin-related protein Arpl are required for normal nuclear distribution in filamentous fungi.";

"Cell Biol. 127:139-149(1994).

-!- FUNCTION: DYNEIN HAS ATPASE ACTIVITY. CYTOPLASMIC DYNEIN ACTS AS MOTOR FOR THE INTRACELLULAR RETROGRADE MOTILITY OF VESICLES AND ORGANEILES ALONG MICROTUBLIES. REQUIRED TO MAINTAIN UNIFORM NUCLEAR DISTRIBUTION IN HYPHAE.

-!- SUBUNIT: CONSISTS OF AT LEAST TWO HEAVY CHAINS AND A NUMBER OF INTERMEDIATE AND LIGHT CHAINS.

-!- SUBCELLULAR LOCATION: CYTOPLASMIC.

-!- SIMILARITY: BELONGS TO THE DYNEIN HEAVY CHAIN FAMILY.
                                                                                                                                                                                                                                                                                                                                      EMBL; L31504; AAA64908.1; ..
